

AN EASIER WAY TO DESIGN
AND PRINT ID BADGES

DESCRIPTION

Security. Time and Attendance. Access Control. Visitor Management. There are dozens of uses for ID badges. Now, there is finally an easy way to design and produce great-looking ID badges for your organization.

EZBadge is the first and only *truly* easy ID badge production software on the market. With a preconfigured database and several attractive preformatted card layouts to choose from, you can literally get setup and start producing badges with just a few mouse clicks.

If none of the predesigned layouts meet your requirements, you can modify them as needed, or start with a blank slate and design your layout from scratch. **EZBadge** has enough flexibility to allow you full control over the look of your badges.

The built-in design tools include give you the ability to design your badges with backgrounds (solid color or image), logos/graphics, cardholder photo, barcodes, fixed text, and database text. With **EZBadge**, you can even encode magnetic stripes (with mag encoder-equipped card printers).

EZBadge is perfect for any organization looking for a simple, straightforward, standalone system to produce great-looking ID badges.

AN EASIER WAY TO DESIGN AND PRINT ID BADGES

FEATURES

- Runs on Windows 95, 98, ME, NT, 2000, XP
- Single and dual-side card design
- Single photo image stored in DB
- Five fixed data fields (First Name, Last Name, Full Name, ID Number, Title), and five user-definable fields.
- All card designs will share same database
- One-click toggle to switch from production mode to edit mode and back for easy "tweaking" of card design.
- Barcode printing (Code 39)
- Three-Track ISO Standard Mag Encoding
- Design tools include background, logos, photo image, barcode, text
- Simple DB search on all fields
- TWAIN camera support
- Image import from file
- Supports import of graphics in most industry standard formats (jpg, bmp, gif, tif, wmf).
- Built-in cardholder database
- Design and save multiple card designs
- User defined fields will maintain their user specified label across all design (once a field has been named, the same name will appear in the design screen for all future designs).
- Template library with multiple pre-designed card templates—All designs can be customized
- Assign a default printer for each card design with the ability to override at print time.
- Context sensitive help
- Full-bleed overprinting of background image for "off the edge" printing on CardJet printer.
- Select background image from image library, or select solid color.
- Record navigation toolbar
- Click and Drag Text Fields on Card Design
- Web-Based Software Registration
