Portland, OR. – January 11, 2008 – TransTech Systems, Inc. and LaserCard Corporation (NASDAQ:LCRD), a leader in highly secure multi-biometric ID cards, announced that they have signed an agreement for business development and distribution of LaserCard's Permanent Resident Card (Green Card) Authenticator.

The contract allows TransTech Systems (TTS) to conduct channel development, integration partner development, sales, training and support of LaserCard's new Green Card Authenticator (GCA) in the US market. LaserCard Corporation, a leader in Secure ID Solutions, has been manufacturing the U.S. Permanent Resident Card for the Federal Government for more than 10 years. The cards are based on LaserCard's advanced Optical Memory Card technology. LaserCard has developed the Green Card Authenticator to help employers easily and quickly validate the Resident Card documents of both existing or potential employees and contractors.

"We are very fortunate to have signed a distribution agreement with TransTech Systems," said David Oller, Vice President of Sales for LaserCard. "TransTech Systems is a leading value added distributor of secure ID in North America today. Their relationships with software developers and a sales channel of over 500 systems integrators in the ID market makes them an ideal fit for our distribution plans for our new hardware products."

"The LaserCard GCA is a great addition to our line," said Jeff Kruse, General Manager of TransTech Systems. TransTech supplies several levels of ID scanning devices which read data from or confirm the validity of documents such as drivers' licenses and passports. The GCA meets needs in both the Human Resource and Security Departments. "Our dealer channel is constantly looking for ways to bring more value to their customers. The GCA is a perfect add-on to existing systems and will also open doors to new business."

About LaserCard Corporation

LaserCard Corporation, a leader in secure ID solutions, manufactures and markets LaserCard® optical memory cards, LaserPASS™ Optical/RFID cards and chip-ready Optical/Smart™ cards, all featuring Optical IDLock™ technology, and other advanced-technology secure identification cards. The Company's secure ID cards are used in countries around the world, including the United States, Canada, Italy, India and the Middle East for demanding security credentialing requirements such as border security, immigration and national identification. In addition, the Company provides optical card

read/write drives, optical card system software, card-related ID subsystems and card issuance enabling services.
