

INTRODUCING THE *PLUS-CARD BIO* FROM TRANSTECH SYSTEMS!

Plus-Card Bio is a standard, high quality, yet completely *biodegradable* dye-sub printable PVC card for the desktop ID card printer market.

Plus-Card Bio is an environmentally conscious plastic card designed and manufactured with revolutionary ingredients added to the PVC causing it to completely biodegrade under appropriate conditions.

Plus-Card Bio performs exactly like standard PVC cards. Under normal everyday usage, the cards maintain their integrity. They may be printed on, foil stamped, die-cut, embossed, stored in a wallet, get wet, and be stored in normal conditions without breaking down. *However*, when Plus-Card Bio comes into consistent contact with fertile surroundings such as a compost pile, landfill, soils, or bodies of water, the microorganisms in these environments are attracted to the hydrogen-carbon chains in the PVC. All that is left behind is matter that can easily be worked into soil or water and it has no toxic effect on the environment.

The new Plus-Card Bio comes in boxes of 500 (wrapped in sleeves of 100) and may be used with any of the extensive range of desktop card printers available from TransTech Systems.

The cards come in three styles: blank cards and LoCo or HiCo magnetic stripe. Please contact your TransTech Sales Manager, call customer service at 1-888-843-3643 or email us at sales@ttsys.com for pricing.
